Gluten free grocery list printable

Beat the overwhelm of eating gluten-free with this simplified printable gluten-free grocery list and tips for easy shopping. While eating gluten-free may feel like you’re flipping your life upside down, having a helpful guide can make the transition a breeze. Read this article for 10 easy gluten-free grocery shopping tips and a printable grocery list to jump-start your gluten-free life! Other helpful gluten-free resources Our Essential Gluten Free Living Ebook The entire purpose of this ebook is to show you how to fill your kitchen with safe gluten free ingredients. There are 60+ recommended gluten free and celiac safe brands and tips for sourcing foods that often have cross-contact with gluten. You'll also find loads of tips for making the gluten-free transition easier! Note that the ebook is written with people with Celiac Disease in mind. I'll start with the tips first, since they make finding the items on the printable gluten-free grocery list so much easier. Read these before you go to the grocery store. 1. Shop the perimeter of the grocery store first. The perimeter of the grocery store is where you’ll find fresh produce, meats, dairy products, and other naturally gluten-free foods. These are also healthier choices since they are whole and unprocessed. If you do come across processed or packaged versions of whole foods, check the ingredients label to make sure there is no added starch, wheat, or gluten-containing ingredients. 2. Keep it simple - whole foods and products with few ingredients are best. Once you picked up your fresh whole foods look for minimal ingredient products. These include nuts, seeds, dried fruits, cheese (if you can eat dairy), coconut milk, plain teas, and coffee. Even minimal ingredient foods can have added flavorings, spice blends, and gluten, so remember to read the ingredients label. 3. Shop with a gluten-free grocery list. Walking into a supermarket without a plan can be overwhelming! Chances are you need to change your usual routine now that you eat strictly gluten-free. We provide a printable gluten-free grocery list at the bottom of this page and in the VgF Free Resource Library! It includes healthy, gluten-free items and replacements that are easy to find, easy to cook, and absolutely delicious. 4. Have a plan for suspicious ingredients. If you find a product with questionable ingredients, take a picture of the name and bar code area. Be sure the numbers around the bar code are clear so you can read them off to the company when you call. If your grocery store has a return policy, you can also purchase the product first with the plan to return it if needed. 5. Find the gluten-free section. While it’s healthiest to buy mostly whole foods, you can replace bread, crackers, cookies, and other treats with gluten-free versions. Most supermarkets have a section reserved for gluten-free products. Ask a sales clerk if you can’t locate them yourself. 6. Research gluten-free brands beforehand. In the USA, common gluten-free brands include Pamela’s, Glutenfreeda, Canyon Bakehouse, Udi’s, Enjoy Life, and Glutino. In Europe, you can rely on Schaer products and other region-specific brands. 7. Avoid bulk bins. Nuts, grains, seeds, flours, and more can be found in the bulk bins at lower prices than the packaged versions. However, products in these bins are switched and customers use scoops for multiple products leading to serious risk of cross-contact. If you have celiac disease or are sensitive to small amounts of gluten, avoid the bulk bins. 8. Watch out for deli meats and dairy products. Whether packaged or from the meat counter, deli meats often have added flavorings and preservatives. Stick to safe gluten-free brands (like Applegate Farms, USA) and always read the ingredients label. At the meat counter, be aware of cross-contact on the meat slicer and preparation surfaces. Don’t hesitate to ask questions and advocate for your needs. Tip: Visit the meat counter at a quiet time of day so you can ask questions. Dairy products can have additives too - be sure to check the ingredients label. 9. Choose gluten-free grains carefully. Multiple types of grains are often processed in the same factories and on the same packaging lines. Choose gluten-free grains from a company with a dedicated gluten-free facility (ex: Ancient Harvest Quinoa, USA) or one with cleaning practices you feel comfortable with. You can get this information from the company’s website or by calling their customer service line. Doctors recommend newly diagnosed celiacs wait at least 6 months before adding oats to their diet. Some celiacs find they can never eat oats without a bad reaction. If/when you add oats to your diet, be sure to look for Gluten-free labeled or certified oats. Better yet, look for gluten-free “purity protocol” oats which are processed in a way that avoids cross-contact with gluten. 10. Buy plain items and flavor them at home. Fewer ingredients means less chance of cross-contact. Natural and artificial flavors can also include trace amounts of gluten. Buying plain products and adding natural flavors at home (ex: plain yogurt, add your own honey) is a great way to make safer gluten-free choices. Pin and screenshot these Gluten-free Grocery Tips: Your Printable Gluten Free Grocery List A full printable gluten free grocery list with check boxes is available at the bottom of this page. You can also find it in our Free Resource Library which is available to subscribers -- you can join our community using any of the "subscribe" boxes on this page. The Essential Gluten Free Living Ebook has more specific information on sourcing gluten-free products for people with celiac. For all of these foods, make sure you read the ingredients labels and follow the tips above. Fresh Fruits and Vegetables Apples Oranges Lettuce Bell peppers Broccoli Potatoes Sweet potatoes... Add any of your favorites here! Fresh fruits and vegetables are staples of a gluten-free diet. Unprocessed Meats, Fish, and Eggs Dairy and Dairy-free alternatives Milk/Almond MilkYogurtButterCheese Helpful Tip: Lactose is the sugar found in milk. Since Lactose intolerance is a symptom of Celiac Disease, many people recently diagnosed avoid dairy products until their gut heals. Gluten Free Grains Rice Wild rice Corn Millet Sorghum Teff Gluten-free pseudo-grains (grain-like seeds) include quinoa, buckwheat, and amaranth. Condiments Soy sauce (always buy the gluten-free version)MayonnaiseMustardSriracha Salsa Cooking Ingredients BrothDried FruitOilsOlivesVinegar Helpful Tip: Seasoned vinegars may not be gluten-free. MALT vinegar is not gluten-free. Baking Ingredients These are my favorite Gluten-Free Flours: Our Easy Gluten Free Baking Recipes can be made with these ingredients. Most Baking Sodas, including Arm and Hammer are gluten free. Be careful to read the ingredients in baking powder. As with the rest of these categories, we go much more in depth in our Essential Gluten Free Living Ebook. Snacks Rice cakesNutsNut butters You can check out our Gluten Free Snack Recipes too. Spices My go-to spices are listed for you in our printable gluten-free grocery list. Download our Free Printable Gluten-Free Grocery List After your trip, visit us again and let us know how it went! Happy gluten-free grocery shopping, ❤ Jamie We’ve created a simplified, printable gluten free grocery list that will help make grocery shopping feel easier! Print it, save it to your phone, or download it to your desktop. Most of the items listed are naturally gluten free, but again, we always recommend checking product labels! Not feeling quite confident yet in knowing what is and isn’t gluten free? We recommend starting out simple with naturally gluten free foods. DOWNLOAD OUR FREE PRINTABLE GLUTEN-FREE GROCERY LIST When you've been diagnosed with celiac disease or non-celiac gluten sensitivity, you need to eliminate all traces of gluten in your diet. Gluten hides in unexpected places, and it takes some time to learn them all. You also need to take steps to avoid gluten cross-contamination in your food. Although this may sound difficult, there are some simple things you can do to make this easier when you set up a non-gluten friendly kitchen. For many, the hardest part of going gluten-free is changing your relationship with food. You will likely find yourself mourning the loss of some of your favorite foods or being frustrated with the lack of inexpensive, convenience foods. This is a normal reaction and will take time to adjust to. However, for people with celiac disease or a true gluten sensitivity, eliminating gluten is medically necessary and will create noticeable positive changes in your health that will more than make up for the inconvenience. On a gluten-free diet, you can still eat a lot of healthy and delicious foods. And fortunately, as gluten-free eating has gained popularity over the years, there are more convenient options available and plenty of ways to make gluten-free variations of your favorite comfort foods. Studies show that it's not uncommon for people to be overweight or obese at the time they're diagnosed with celiac disease. In addition, some people are underweight—in some cases severely underweight—when they're first diagnosed, and want to gain weight. The gluten-free diet is not designed to be a weight-loss diet, however, when people who are diagnosed with celiac disease eliminate gluten, their weight may naturally normalize. However, if you're actively trying to gain or lose weight it is helpful to be aware of how many calories you're consuming. Not all gluten-free foods are considered healthy. Choosing whole foods, such as fruits, vegetables, lean protein, gluten-free whole grains, nuts, and seeds, is important for increasing nutrient content as well as limiting calories. When you're first starting the gluten-free diet, meal planning and grocery shopping can present a challenge. The good news is gluten-free foods are easier to find these days and are usually labeled prominently. In fact, many grocery stores have a section devoted to gluten-free alternatives. Many whole foods are gluten-free in their natural state. For example, fresh vegetables and fruits, regular milk, rice, potatoes, meat, seafood, and poultry are all safe on a gluten-free diet. However, some prepackaged foods may have hidden gluten and it is important to read ingredient lists. Gluten-Free Foods Fresh fruits and vegetables Fresh, plain meat, poultry and fish Breads and pastas labeled "gluten-free" Plain rice and corn Most potato and tortilla chips (check the label) Plain milk, yogurt, and eggs 100% fruit juice Many sodas and bottled beverages Legumes Naturally gluten-free grains, such as quinoa, amaranth, teff, sorghum, brown rice Gluten-Containing Foods Bread and bread products (wheat) Pasta (wheat and semolina) Baked goods, including muffins, waffles, and pastries (wheat) Some canned soups (pasta, wheat, and barley) Crackers and cookies (wheat, barley, and rye) Many frozen foods (wheat and barley) Some ice cream (wheat) It can help to do some research before you venture into the grocery store. Check your favorite prepackaged foods to determine whether or not they're gluten-free; if they're not, then see if you can identify a gluten-free version of the same food to try. For example, there are many different types of gluten-free pasta, some of which are made by the same companies as regular, wheat-containing pasta. Gluten-free bread represents the biggest stumbling block for many people. Although gluten-free bread has improved, it's still may not have the same taste and texture you may be used to. You may want to consider eliminating bread while you adjust to being gluten-free, and then experimenting with gluten-free bread (pro tip: it's better toasted). Shop the perimeter of the grocery store, where you'll find the produce, meats, poultry, fish, dairy, and eggs. Whole, fresh foods are gluten-free. If you are looking for a gluten-free grain that is easy and inexpensive, opt to purchase a big bag of brown rice. Rice is an inexpensive, versatile grain that makes an easy addition to meals. Only purchase grain-based products such as cookies or crackers if they're specifically labeled "gluten-free." Gluten can hide in unexpected places. For example, some ice cream manufacturers use wheat as a thickener. In addition, conventional soy sauce, which you might think is made from soybeans, contains wheat as its top ingredient (gluten-free soy sauce is available in most supermarkets). When it comes to prepared foods, such as condiments or frozen meals, rely on gluten-free lists of products or on grocery store shelf tags (some grocery store chains, such as Publix and Wegmans, label prepared foods "gluten-free" on the shelves). Eating gluten-free doesn't mean you have to forgo snacks. Here are some gluten-free snacks, plus their calorie and nutritional information: 9 gluten-free crackers (Mary's Gone Crackers brand): 140 calories, 6g fat, 21g carbs, 0g fiber, 1g protein, 240mg sodium 10 baby carrots with snack-sized hummus singles (Sabra brand): 185 calories, 11g fat, 17g carbs, 6g fiber, 5g protein, 250mg sodium fresh fruit cup with melon, grapes, and mixed berries (14 oz): 160 calories, 0.5g fat, 39g carbs, 4g fiber, 3g protein, 40mg sodium 1 medium-sized banana: 105 calories, 0.5g fat, 27g carbs, 3g fiber, 1.3g protein, 1mg sodium 1 container Greek vanilla nonfat yogurt (Chobani brand): 120 calories, 0g fat, 16g carbs, 0g fiber, 13g protein, 240mg sodium 1 cup celery sticks with nut butter single pack (Justin's brand): 118 calories, 16g fat, 13g carbs, 5.4g fiber, 8g protein, 136mg sodium 1.5 oz bag plain potato chips (Lays Classic brand): 240 calories, 16g fat, 23g carbs, 2g fiber, 3g protein, 250mg sodium 1 oz pistachios, shelled and lightly salted (about 45 kernels): 170 calories, 13g fat, 5g carbs, 3g fiber, 6g protein, 160mg sodium 1 energy bar (Kind Bar, dark chocolate nuts & sea salt flavor): 180 calories, 15g fat, 16g carbs, 7g fiber, 6g protein, 140mg sodium 1.55 oz chocolate bar (Hershey Milk Chocolate brand): 210 calories, 13g fat, 26g carbs, 1g fiber, 3g protein, 35mg sodium If you are eating gluten-free due to celiac disease or gluten sensitivity, it is important to have a safe, gluten-free place to cook to avoid cross-contamination—even a tiny bit of gluten may make you sick. That means ridding your kitchen of gluten foods and ingredients and probably replacing some of your cooking pans and utensils. You should give away or throw away gluten-containing items you no longer can eat, and buy new kitchen tools, especially anything that's plastic or which has scratches that can harbor gluten residue. If the rest of your household is not going gluten-free with you, establish rules to share a kitchen. Create your own gluten-free space in the kitchen, and keep your cooking pans and utensils separate. Many people buy two sets of tools in different colors. For example, the blue spatulas could be for gluten-free while the yellow spatulas would be for gluten-containing foods. Having the cooperation of your entire household is important for this approach to work. Some beverages may contain gluten and you'll want to avoid those as well. Water, plain coffee, tea, most fruit juices, sodas, energy drinks, and sports drinks are all safe options. Conventional beer is not gluten-free (this includes light beers). Some popular coffee drinks (iced and hot) are not considered safe on the gluten-free diet. In addition, you should beware of certain smoothies, especially "green" smoothies that include wheatgrass, which is not guaranteed to be gluten-free. Gluten-free recipe ideas abound online and in cookbooks. But a recipe doesn't need to be specifically labeled "gluten-free" to fit into a gluten-free diet; it simply needs to not include gluten ingredients. For example, a vegetable stir-fry recipe or a paella rice dish may already be gluten-free. If it's not, you may find it's easy to make the dish gluten-free by substituting gluten-free soy sauce or by choosing different spices. Likewise, you can make any pasta recipe gluten-free by substituting gluten-free pasta and making certain to pick a gluten-free pasta sauce. However, cooking time for gluten-free pasta may differ from wheat pasta and you should refer to the package instructions. There are two approaches you can take when planning your gluten-free breakfasts: you either can replace gluten-containing breakfast foods such as cereal and toast with gluten-free versions of those foods, or you can eat naturally gluten-free foods. Many people combine these two approaches. For example, a healthy gluten-free breakfast can include: If you're in a hurry, grab a gluten-free bagel and layer it with cream cheese (Philadelphia Brand is gluten-free), a hard-boiled egg or handful of nuts and some fresh fruit, or snatch a gluten-free yogurt from the refrigerator on your way out the door. If you make them ahead of time, flourless banana breakfast cookies also can be a time-saver on busy mornings. On the other hand, if you want something more interesting, consider gluten-free egg and black bean breakfast tacos, or baked eggs and red cabbage with Parmesan cheese. You even can host an entirely gluten-free and vegetarian brunch. There are so many delicious gluten-free recipes available that it's impossible to list them all. Here are a few that would make a substantial lunch or dinner main course: For a lighter lunch or dinner, consider: Gluten-free appetizers or side dish ideas include: Sure, you can stick with gluten-free ice cream or sorbet for dessert—those both are safe choices. But there are many more delicious options available: As you saw above, there are plenty of gluten-free snacks available (some healthy and some not). But if you have the time, you can make your own snacks from scratch: There's no doubt about it: following the gluten-free diet means you're likely to cook more meals from scratch. That's good news; cooking from scratch generally makes your meals healthier, because you can choose the best ingredients. But the bad news; cooking from scratch definitely takes more time. You'll need to allow for that when planning your weekly schedule. There are a few ways you can save time and still make healthy, homemade gluten-free meals: Plan ahead to have leftovers by making half again as much food as you think you and your family will eat in one sitting. Clean out and reorganize your freezer (or even consider investing in a standalone freezer) so that you can freeze homemade single serving entrees. Purchase a countertop rice cooker that makes perfect rice every time. Buy pre-chopped vegetables at the grocery store (make sure they're prepared in an area that's separate from the bakery; fortunately, most are). Try gluten-free slow cooker recipes that you can leave cooking while you do other things (this Moroccan beef stew is delicious). Recipes that include wheat flour are more difficult to make gluten-free. However, seasoned chefs often have decent luck replacing flour with corn starch in certain recipes. In addition, gluten-free flour blends such as Cup4Cup claim to be direct replacements for wheat flour in baking recipes (although your mileage may vary somewhat, depending on the recipe). The gluten-free diet is essential for your health if you have celiac disease or non-celiac gluten sensitivity. For those with celiac disease, continuing to consume gluten-containing foods can lead to severe intestinal damage, complications such as osteoporosis, and even certain rare cancers. For people with gluten sensitivity, most doctors don't believe permanent damage is done by continued gluten ingestion, but it's likely to cause unpleasant symptoms. Still, the gluten-free diet isn't guaranteed to be healthy. To improve your health (and potentially lose weight, assuming that's also your goal), you'll need to make sure the gluten-free meal plans you follow include good nutritional choices: lots of fresh vegetables and fruit; lean meats, poultry, and fish (assuming you aren't vegetarian); and whole gluten-free grains. You also can't neglect other issues that affect your health, so make certain to get plenty of good sleep, follow a regular exercise routine, and manage your stress. Taking care of your digestive health is critical, especially if your health requires you to be gluten-free, but simply going gluten-free won't solve all your problems unless you practice other healthful habits at the same time.
